Detector Heater Control

Heater Controller

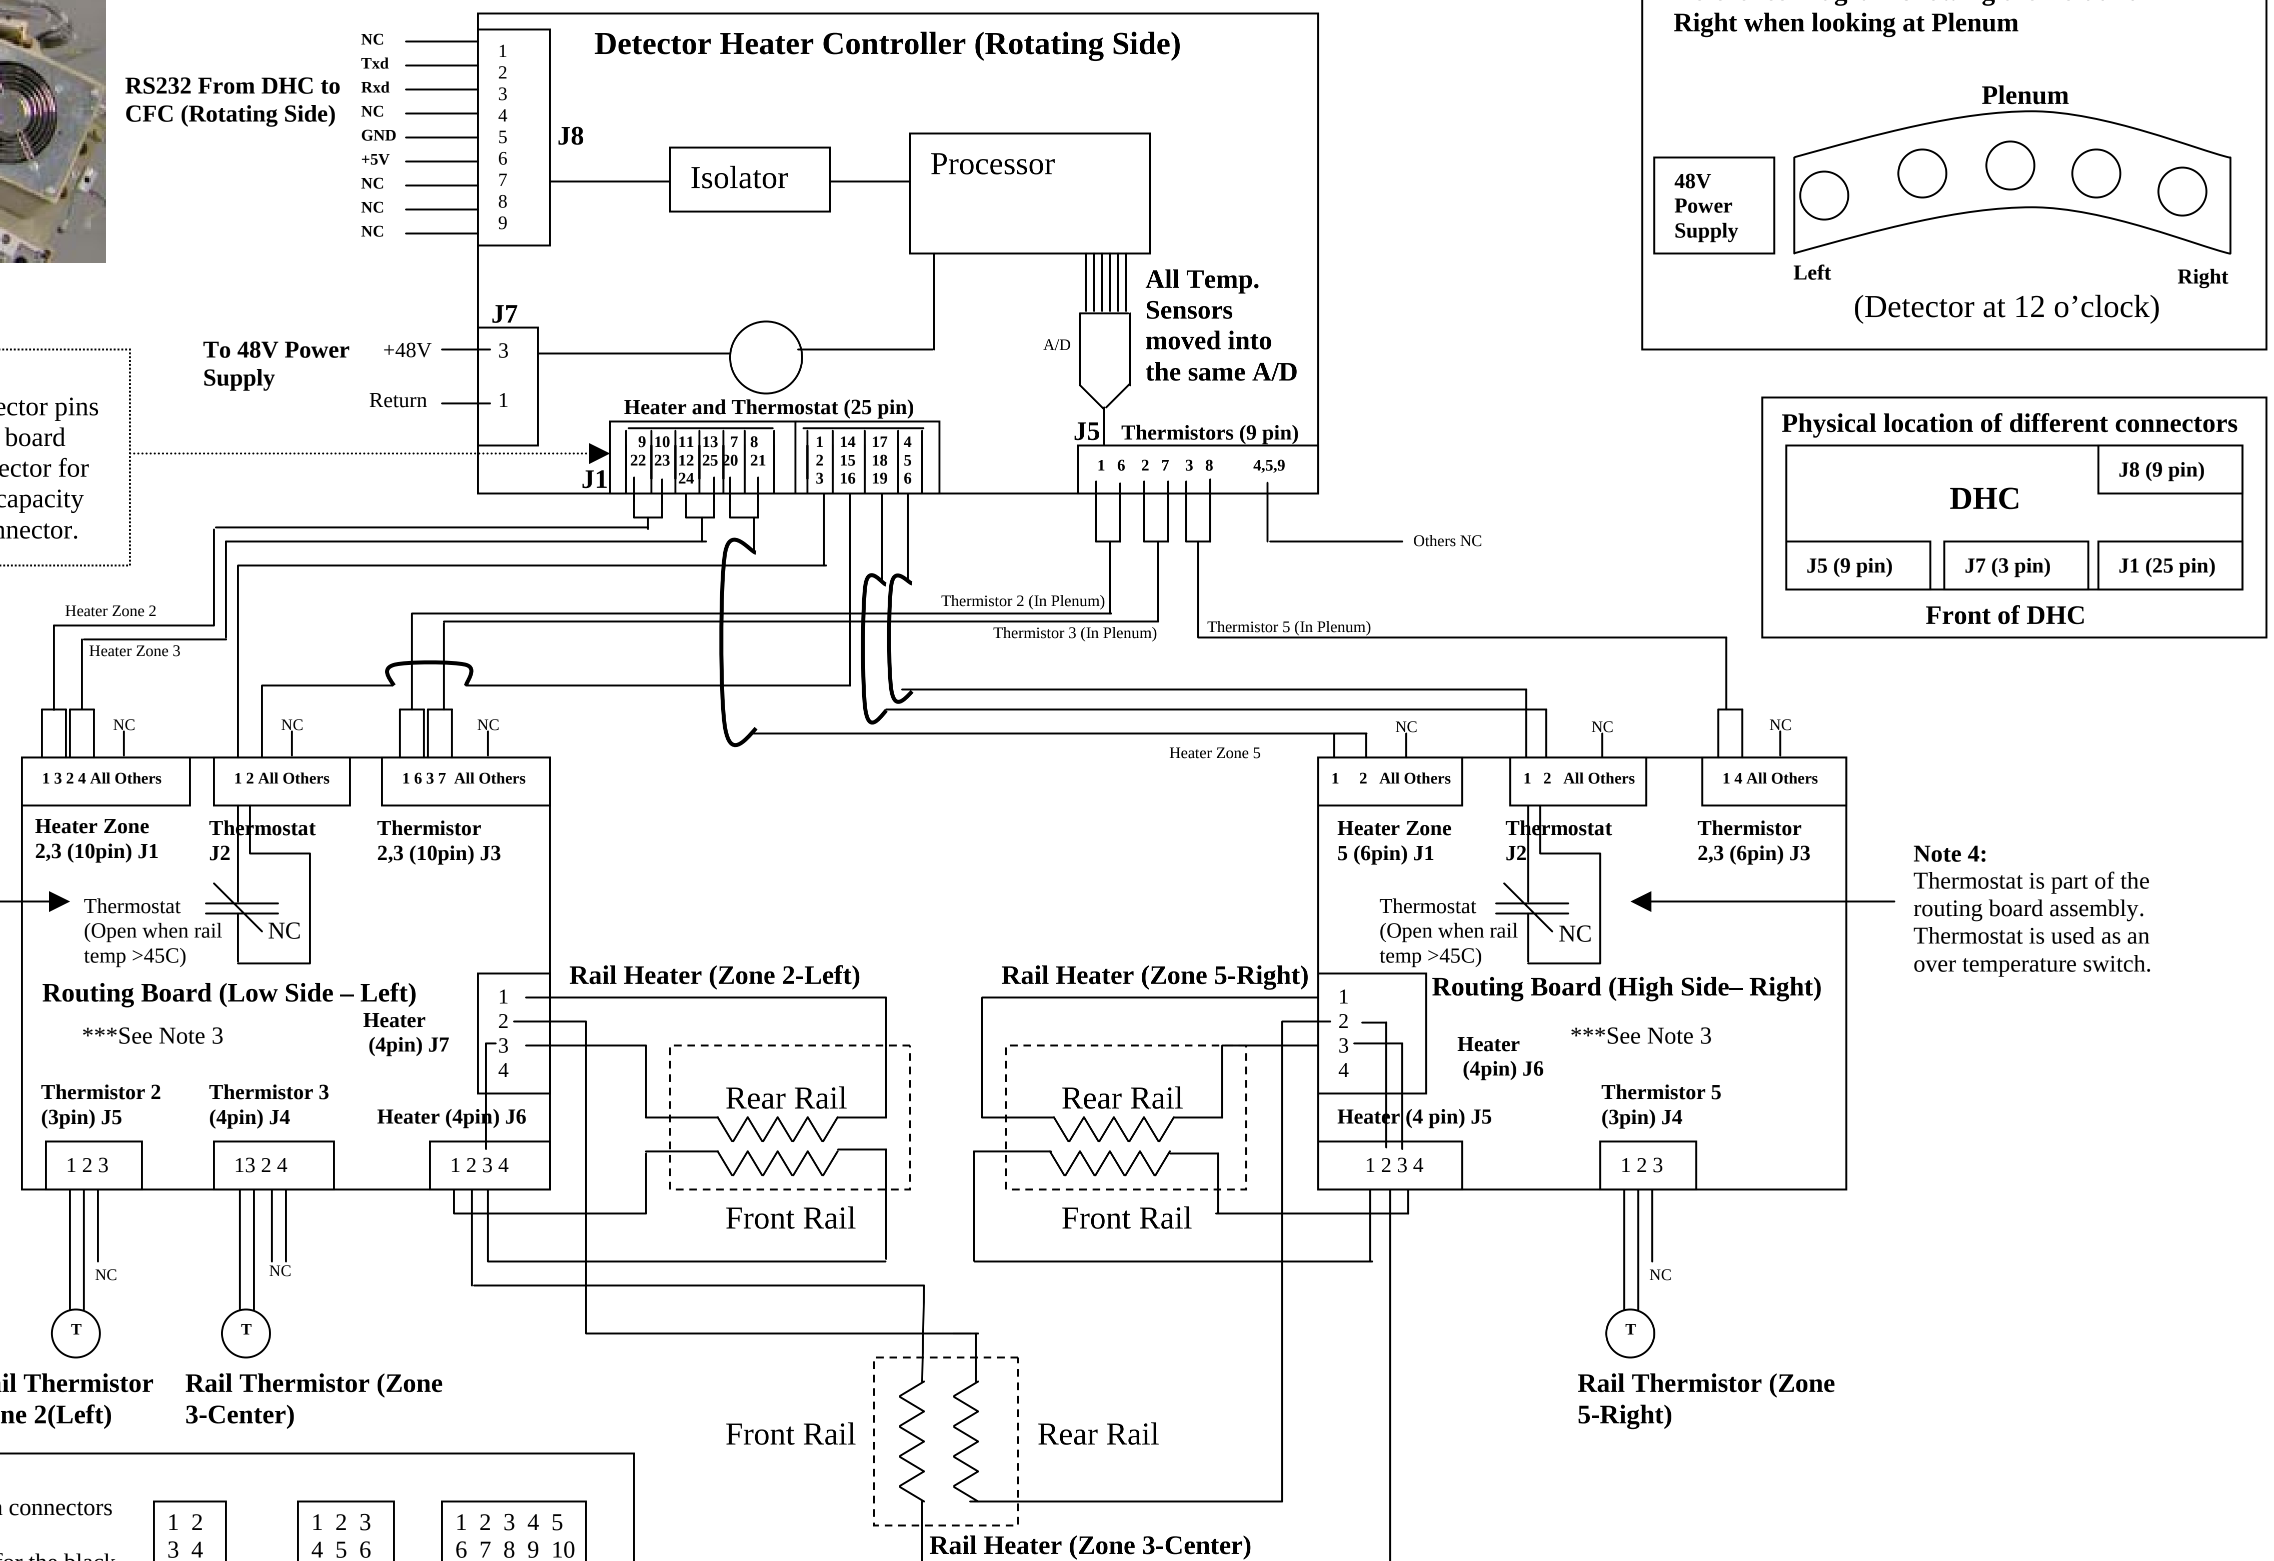
Rail Heater Resistances:

Low side left routing board (input side):
J1 Pin 1,3 is 50-62 ohm (DHC J1 Pins 9,10)
J1 Pin 2,4 is 20-24 ohm (DHC J1 Pins 11,13)
Low side left routing board (Output side):
J7 Pin 1,3 is about 27 ohm (Left Rear)
J6 Pin 1,3 is about 27 ohm (Left Front)
J7 Pin 2 to J6 Pin 2 is 20-24 ohm (Center)
Must have high side board connected to read center zones.

High side right routing board (input side):
J1 Pin 1,2 is 50-62 ohm (DHC J1 Pins 7,8)
High side right routing board (output side):
J6 Pin 1,3 is about 27 ohm (Right Rear)
J5 Pin 1,3 is about 27 ohm (Right Front)

Note 1:
Multiple Connector pins grouped on the board and cable connector for higher current capacity through the connector.

Note 2:
Thermostat is part of the routing board assembly. Thermostat is used as an over temperature switch.



***Note 3

Connector Pinout examples for 4, 6, and 10 pin connectors on Routing boards.
NOTE: The pin labeling on the routing board for the black connectors is wrong. Use this diagram for reference. Pin 1 is correct on the board, the rest of the pins follow this order.

4 pin	6 pin	10 pin
1 2 / 3 4	1 2 3 / 4 5 6	1 2 3 4 5 / 6 7 8 9 10
