TABLE OF CONTENTS

Description - This section applies only to Signa 1.5T or 1.0T systems installed with the Erbtec RF/Pen cabinet.

1- TOOLS REQUIRED

#2 Phillips nonferrous screwdriver (6-32) (For all RFSC components)

#1 Phillips nonferrous screwdriver (4-40)

1/4-inch nonferrous standard screwdriver

DANGER!!

FATAL ELECTRIC SHOCK HAZARD!!
ALL EXTERNAL POWER AND OTHER CABLES MUST BE REMOVED FROM THE RF/PEN CABINET BEFORE REMOVING ANY COMPONENTS FROM THE RF SYSTEM CONTROLLER. VERIFY THAT ALL BREAKERS IN THE REAR OF CABINET ARE OFF AND DISCONNECT MAIN POWER FEED CORD BEFORE OPENING CHASSIS FOR SERVICE. SERIOUS INJURY OR DEATH BY ELECTROCUTION MAY OTHERWISE OCCUR. LOCK OUT AND TAG OUT THE RF/PEN CABINET.

2- SLIDING OUT RF SYSTEM CONTROLLER

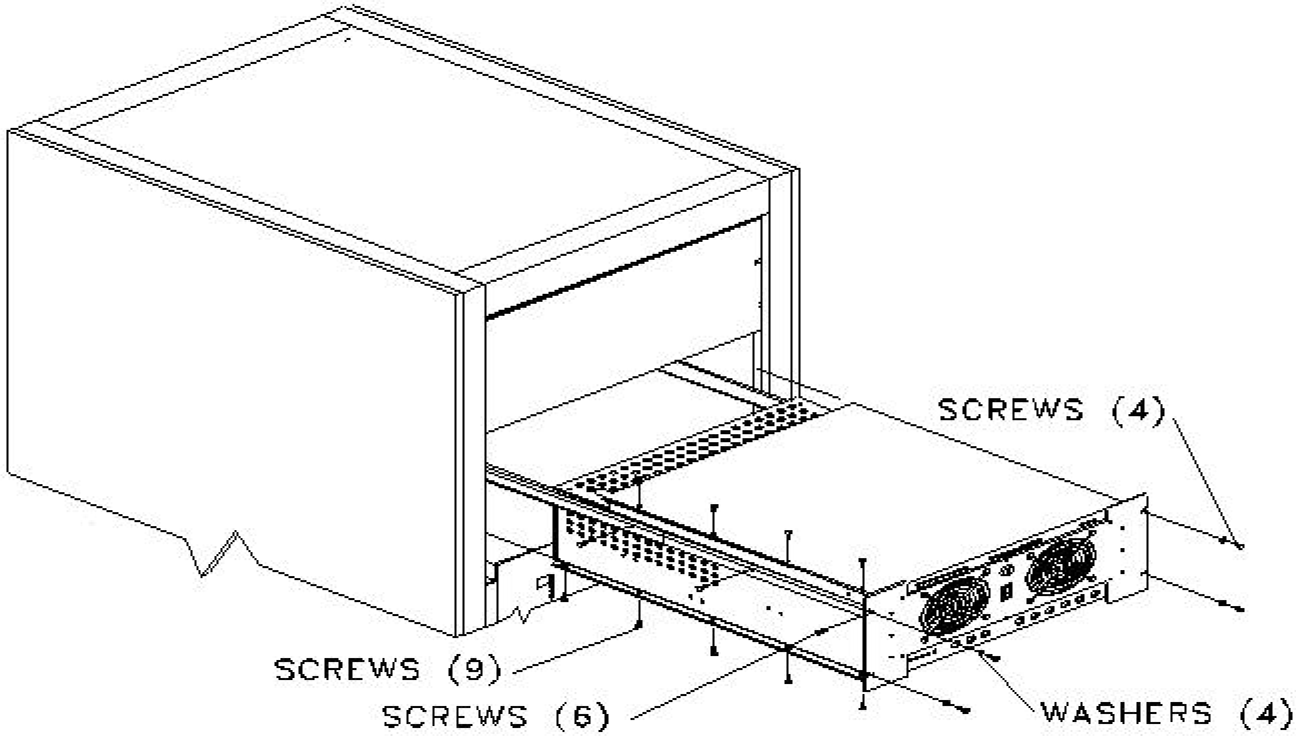
You will need to slide out the RF System Controller (RFSC) module in order to remove and replace any of the RFSC components (unless replacing the RFSC I/F board).

1. Turn off RF/Pen cabinet power circuit breakers on rear of RF/Pen cabinet. Lock out and tag out circuit breaker. (Refer to *Procedure For Safety: Section 6*)

2. Verify that power to the RF/Pen Cabinet is off by checking the fans and LEDs on both the RF amplifier and the RF System Controller (RFSC).

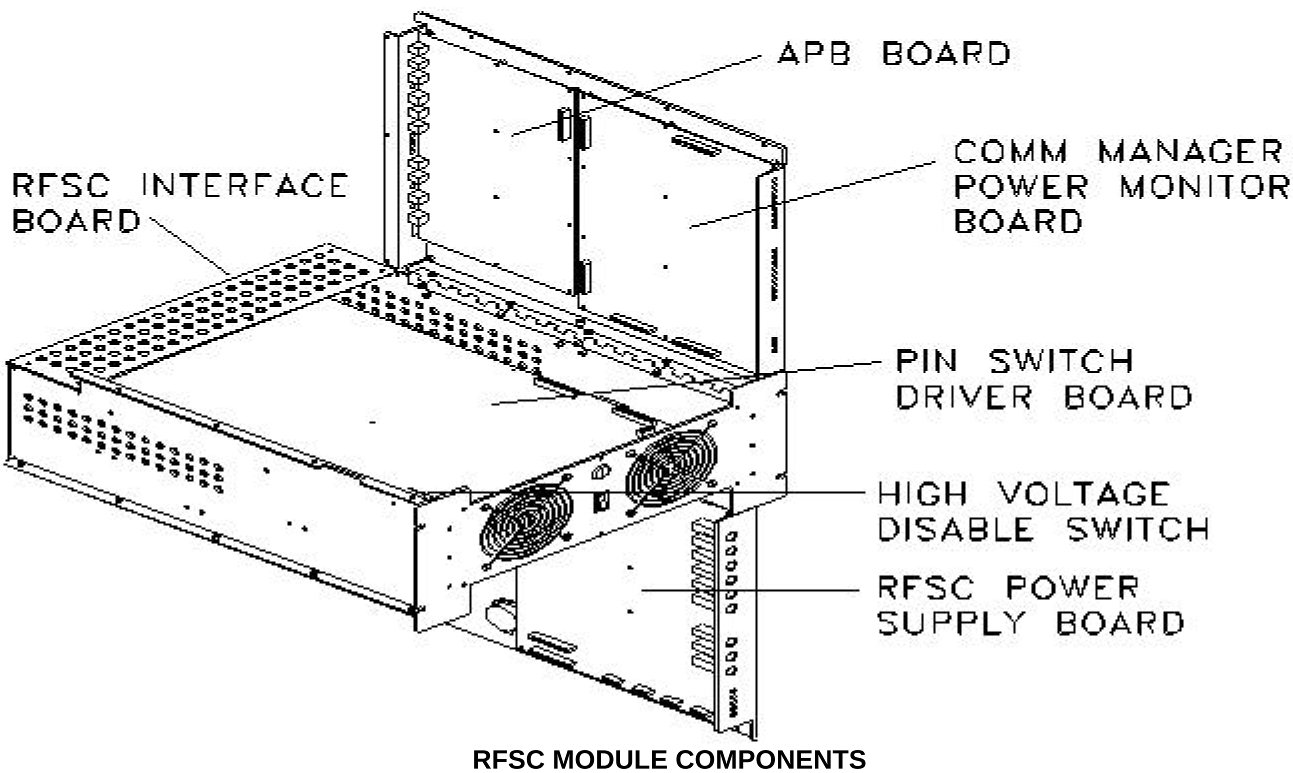
3. Remove the front door from RF/Pen cabinet.

4. Remove the four 10-32x1/2 panhead screws and four #10 flat washers securing the RFSC module chassis to the RF/Pen cabinet. See Illustration L3119a.



RF/PEN CABINET SHOWING RFSC MODULE
ILLUSTRATION L3119A

5. Slide out RFSC from the RF/Pen cabinet (unless replacing the RFSC I/F board). See Illustration L3131a.



RFSC MODULE COMPONENTS
ILLUSTRATION L3131A

6. To replace the Analog Processor Board, Communications Manager/Power Monitor Board, or PIN Switch Driver Board, loosen the four captive screws on the top lid of the RFSC module.

7. Remove the three 6-32 panhead screws on the back of the top lid of the RFSC module, and open the lid.

8. To replace the RFSC Power Supply Board, loosen the five captive screws on the bottom lid of the RFSC module.

9. Disengage the finger latch. Ease bottom lid open.

WARNING!

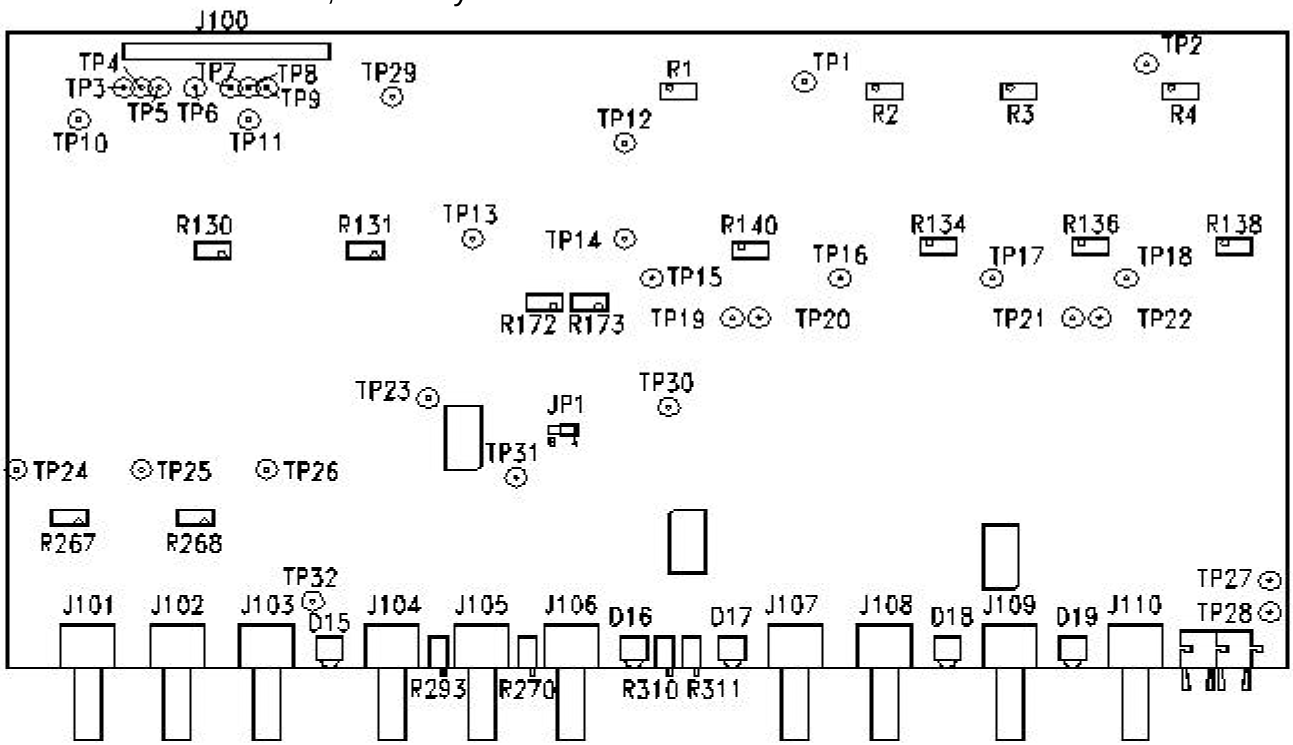
DUE TO WEIGHT OF BOTTOM LID ASSEMBLY, GUIDE LID OPEN.

Go to the appropriate section to continue the removal and replacement procedure:

- Analog Processor Board: see sections 3, 4, 5.
- Communications Manager/Power Monitor Board: see sections 6, 7, 8.
- RFSC Power Supply Board: see sections 9, 10, 11.
- PIN Switch Driver Board: see sections 12, 13, 14.
- RFSC I/F Board: see sections 15, 16, 17.
- RFSC module: see sections 18, 19.

3- ANALOG PROCESSOR BOARD SETUP

See Illustration L3147a, APB Layout



ANALOG PROCESSING BOARD (APB) LAYOUT

4- REMOVAL OF FAILED ANALOG PROCESSOR BOARD ASSEMBLY

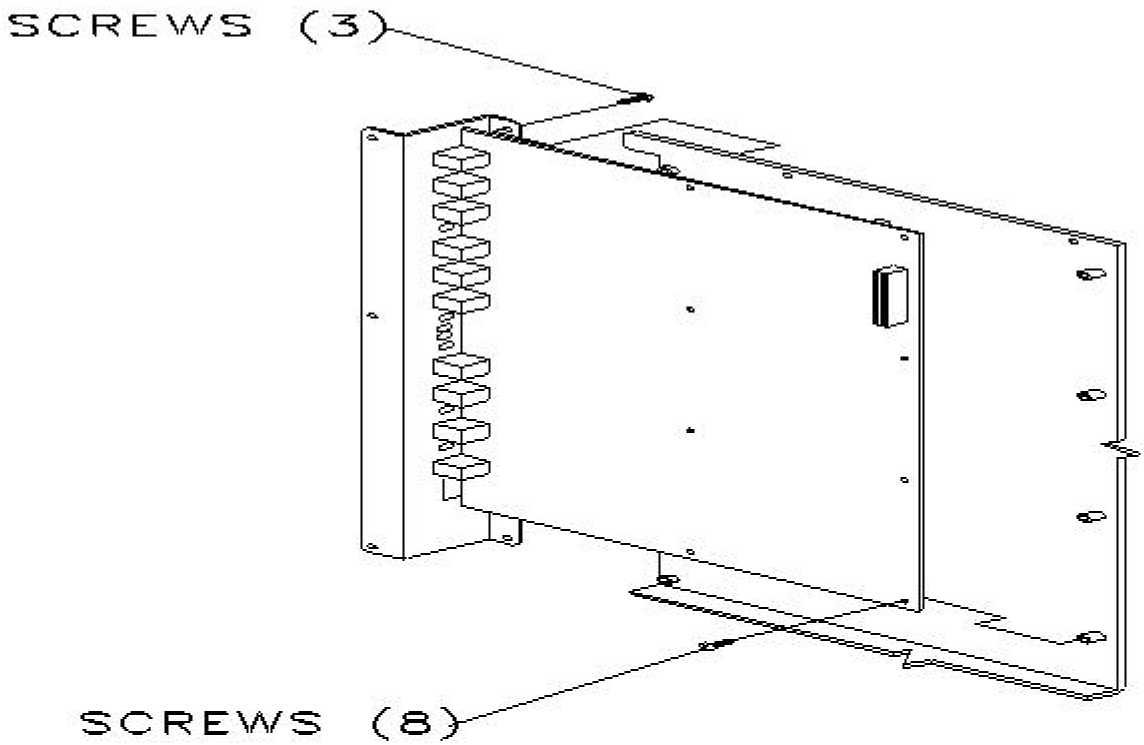
1. Disconnect the ribbon cable from the Analog Processor Board (J100). Illustration L3131a in Section 2 shows the location of the board.

2. Disconnect the ten BNC connectors, and disconnect the two fiber optic connectors on the rear of the lid.

3. Remove the eight 4-40x1/4 panhead screws securing the analog processor board to the lid.

4. Remove the three 4-40x3/8 panhead screws securing the analog processor board assembly to the lid.

5. Remove the failed analog processor board assembly (see Illustration L3136A).



ANALOG PROCESSOR BOARD (APB) INSTALLATIO
ILLUSTRATION L3136A

5- INSTALLATION OF NEW ANALOG PROCESSOR BOARD

1. Position the analog processor board assembly on the top lid of the RFSC module.

2. Install eight 4-40x1/4 panhead screws securing the analog processor board to the RFSC module lid.

3. Install three 4-40x3/8 panhead screws securing the analog processor board assembly to the lid.

4. Connect the ten BNC connectors and connect the two fiber optic connectors on the rear of the lid.

5. Reconnect the ribbon cable to the Analog Processor Board (J100).

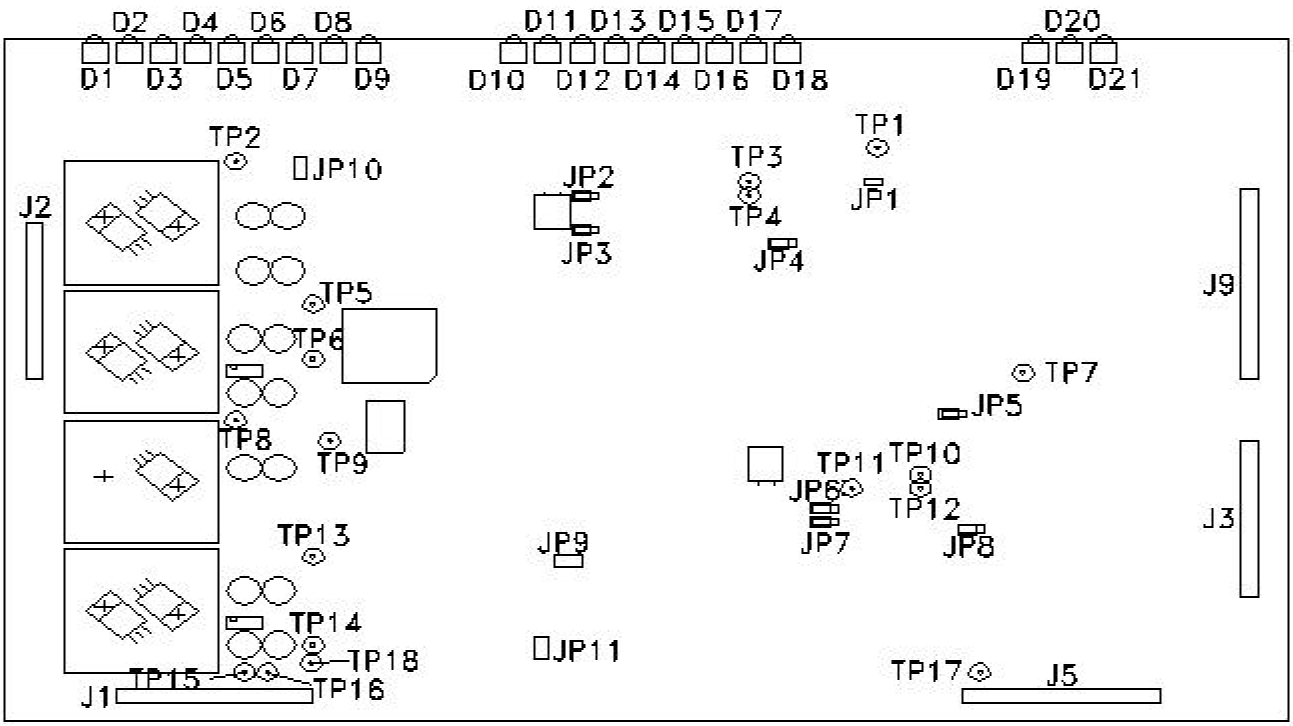
6. Close the lid. Replace the screws on the lid. Slide the RFSC module back into the RF/Pen cabinet and secure with the four 10-32x1/2 panhead screws and four #10 flat washers.

7. Replace front door.

8. Remove lock out and tag out and power up RF/Pen cabinet.

6- COMMUNICATIONS MANAGER/POWER MONITOR BOARD SETUP

See Illustration L3150a, Communications Manager/Power Monitor Board Layout



COMMUNICATIONS MANAGER/POWER MONITOR BOARD LAYOUT

7- REMOVAL OF FAILED COMMUNICATIONS MANAGER/POWER MONITOR BOARD

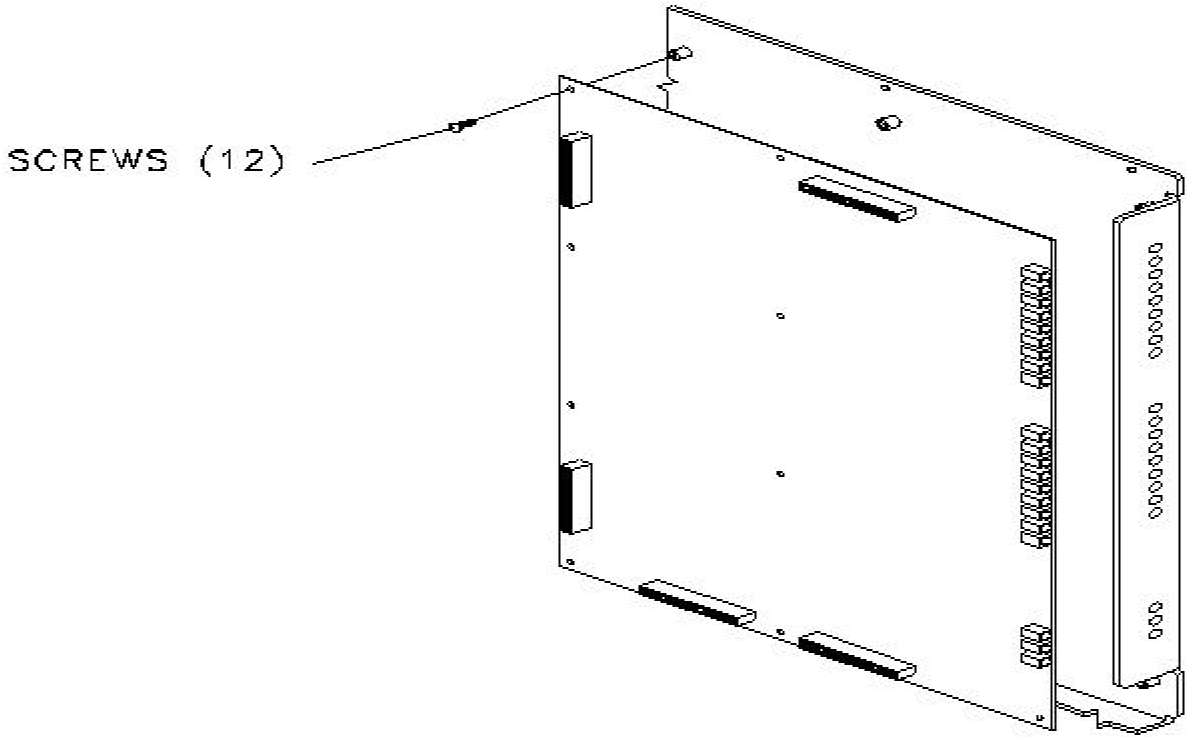
1. The Communications Manager/Power Monitor Board is located on the top cover toward the front (see Illustration L3131a see Section 2).

2. Disconnect the cables attached to the Communications Manager/Power Monitor Board.

3. Remove the twelve 4-40 x1/4 panhead screws securing the board to the RFSC module.

4. Remove the failed Communications Manager/Power Monitor Board.

See Illustration L3137a, Communications Manager/Power Monitor Board.



COMMUNICATION MANAGER/POWER MONITOR BOARD
ILLUSTRATION L3137A

8- INSTALLATION OF NEW COMMUNICATIONS MANAGER/POWER MONITOR BOARD

1. Place the Communications Manager/Power Monitor Board on the top cover.

2. Install twelve 4-40x1/4 panhead screws securing the board to the RFSC module.

3. Reconnect all internal cables to the Communications Manger/Power Monitor Board.

4. Close the lid and tighten the screws.

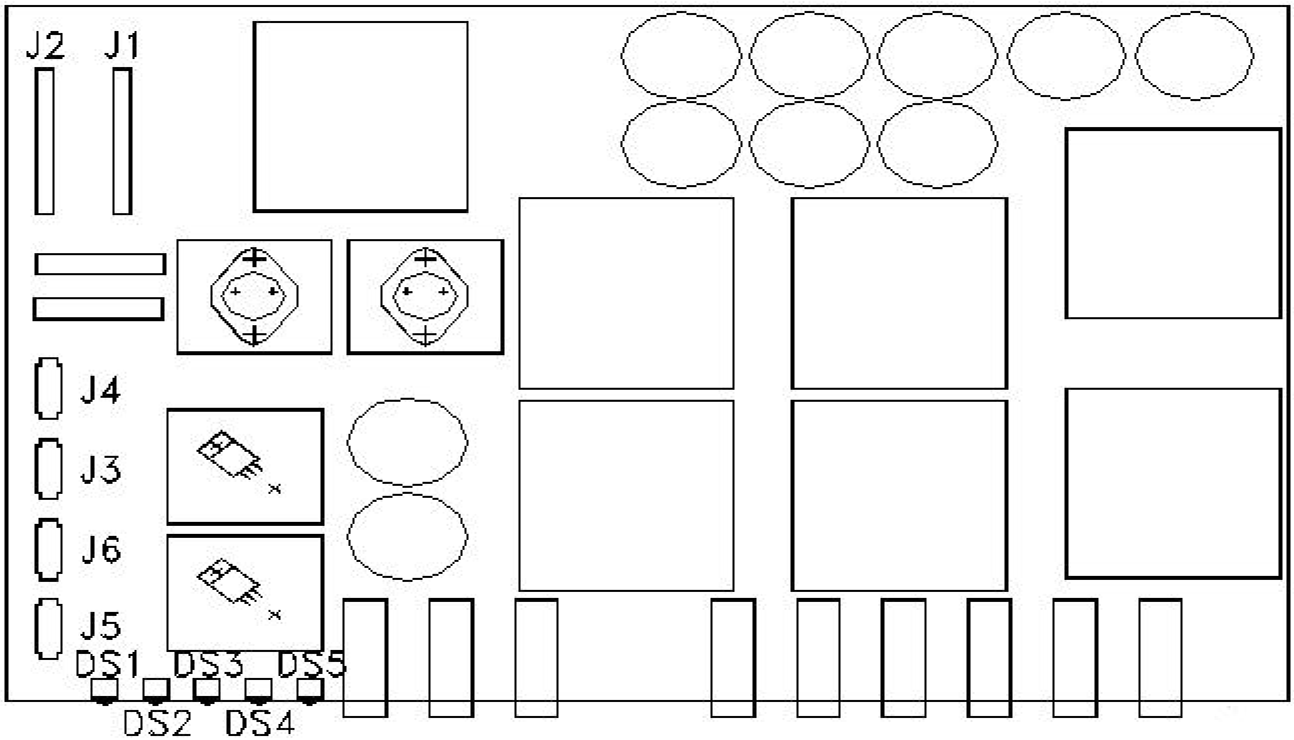
5. Slide the module back into the RF/Pen cabinet and secure with the four 10-32x1/2 panhead screws and four #10 flat washers.

6. Replace front door.

7. Remove lock out and tag out and power up the RF/Pen cabinet.

9- RFSC POWER SUPPLY BOARD SETUP

See Illustration L3132a , RFSC Power Supply Board Layout



RF SYSTEM CONTROLLER POWER SUPPLY BOARD LAYOUT
ILLUSTRATION L3132A

See Table 8; , LED Information

TABLE 8
RFSC LED INFORMATION

LED	Location Schematic	Color	Description	Notes
DS1		YELLOW	HEAD COIL	
DS2		YELLOW	SPECTRO COIL	
DS3		RED	KILL RF	
DS4		YELLOW	BODY COIL	
DS5		GREEN	HIGH VOLTAGE ON	

10- REMOVAL OF RFSC POWER SUPPLY BOARD

CAUTION

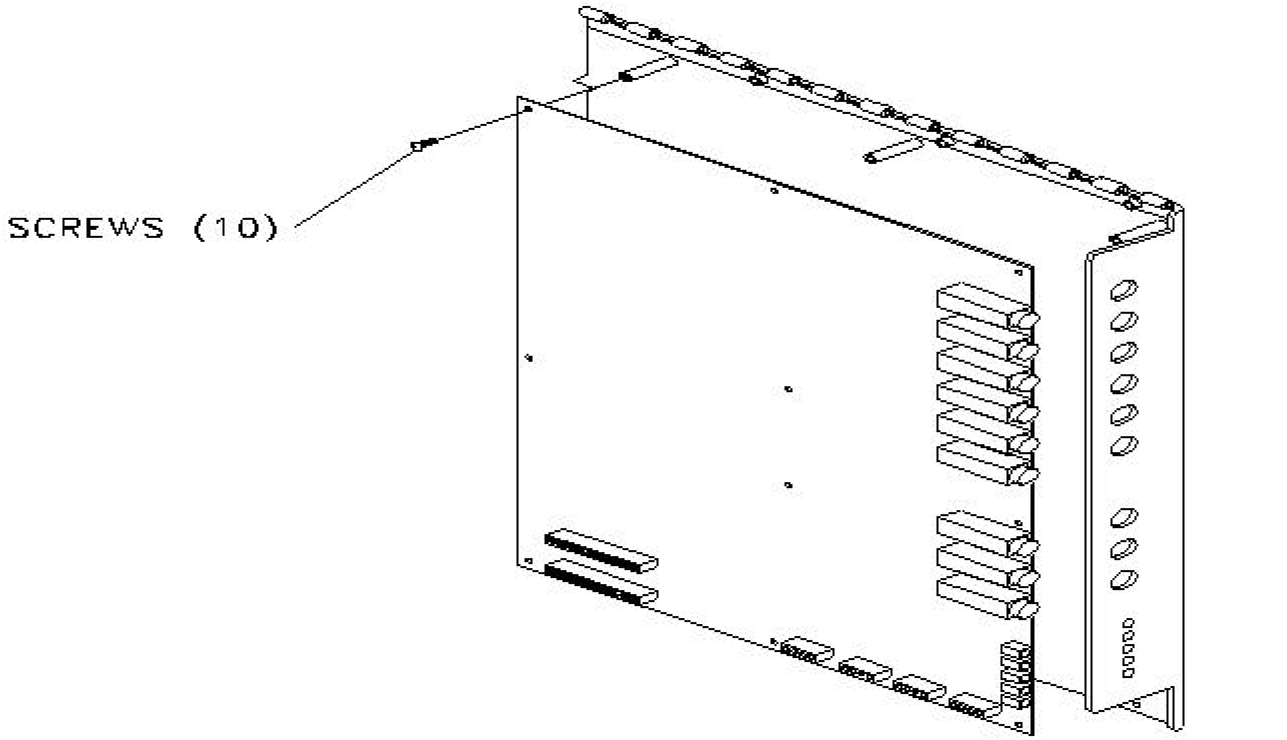
Due To Weight Of Bottom Lid Assembly, Guide Lid Open.

1. Disconnect all cables attached to the RFSC Power Supply Board.

2. Remove the ten 6-32 panhead screws securing the RFSC Power Supply Board to the bottom lid.

3. Remove the failed RFSC Power Supply Board.

See Illustration L3138a, RFSC Power Supply Board



RF SYSTEM CONTROLLER POWER SUPPLY BOARD
ILLUSTRATION L3138A

11- INSTALLATION OF NEW RFSC POWER SUPPLY BOARD

1. Position the RFSC Power Supply Board on the bottom lid with the fuse holders to the front (see Illustration L3138a in Section 10).

2. Attach the ten 6-32 panhead screws, and tighten.

3. Reconnect all internal cables to the RFSC power supply board.

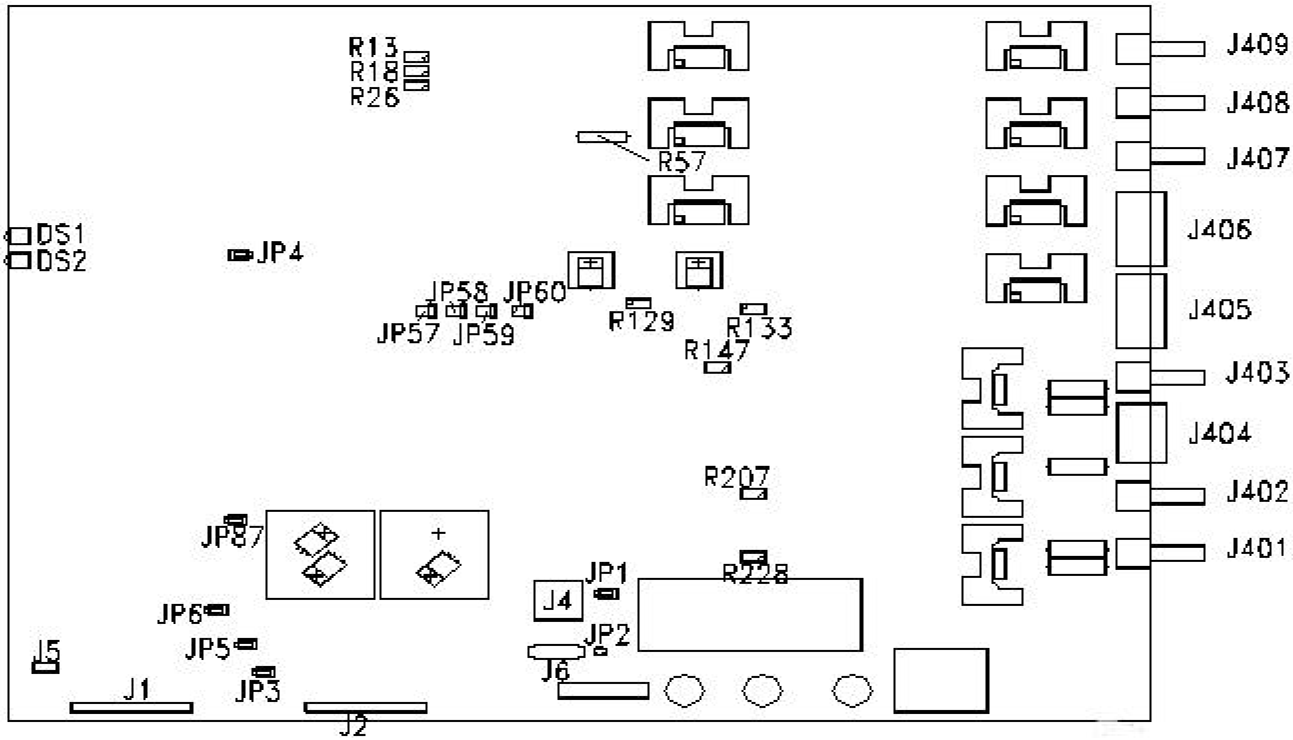
4. Close the lid and tighten the captive screws. Slide the RFSC module back into the RF/Pen cabinet and secure with the four 10-32x1/2 panhead screws and four #10 flat washers.

5. Replace front door.

6. Remove lock out and tag out and power up the RF/Pen cabinet.

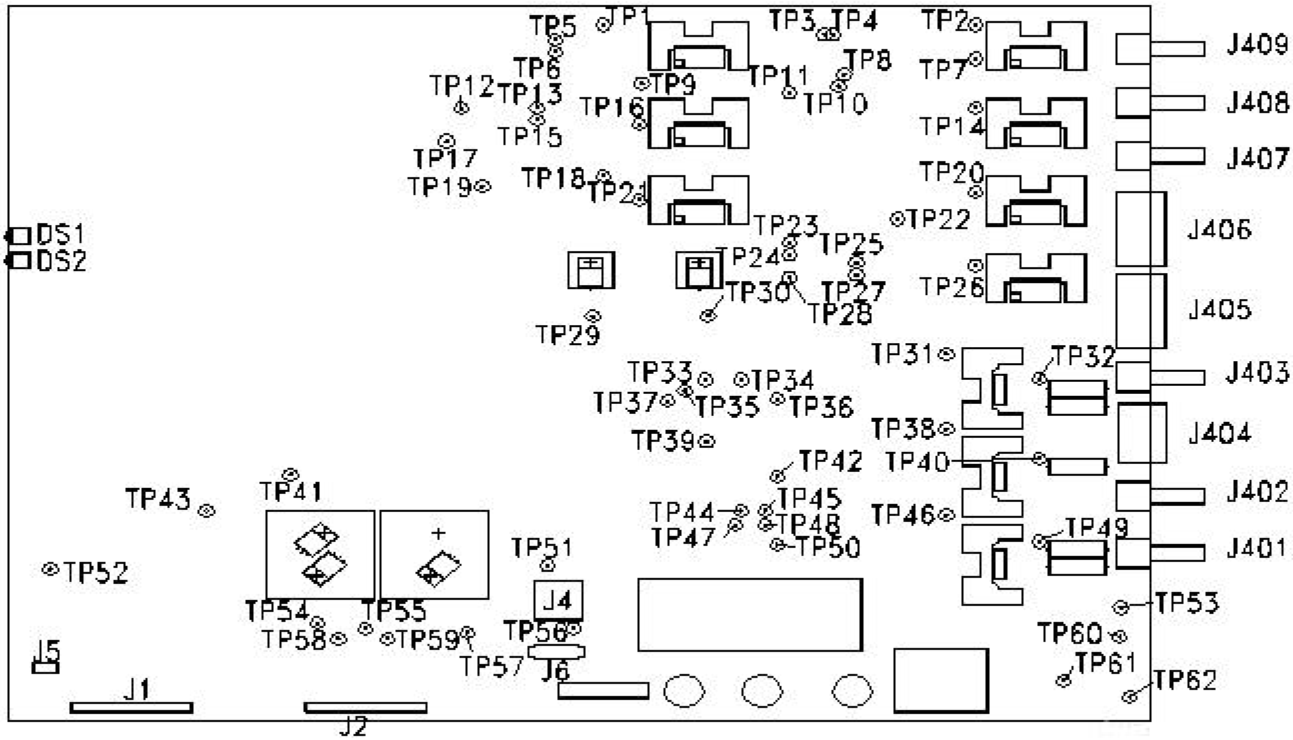
12- PIN SWITCH DRIVER BOARD SETUP

See Illustration L3133a, PIN Switch Driver Board Layout/Jumpers & Pots



PIN SWITCH DRIVER BOARD LAYOUT
ILLUSTRATION L3133A

See Illustration L3133b, PIN Switch Driver Board Layout/Test Points



PIN SWITCH DRIVER BOARD LAYOUT/TEST POINTS

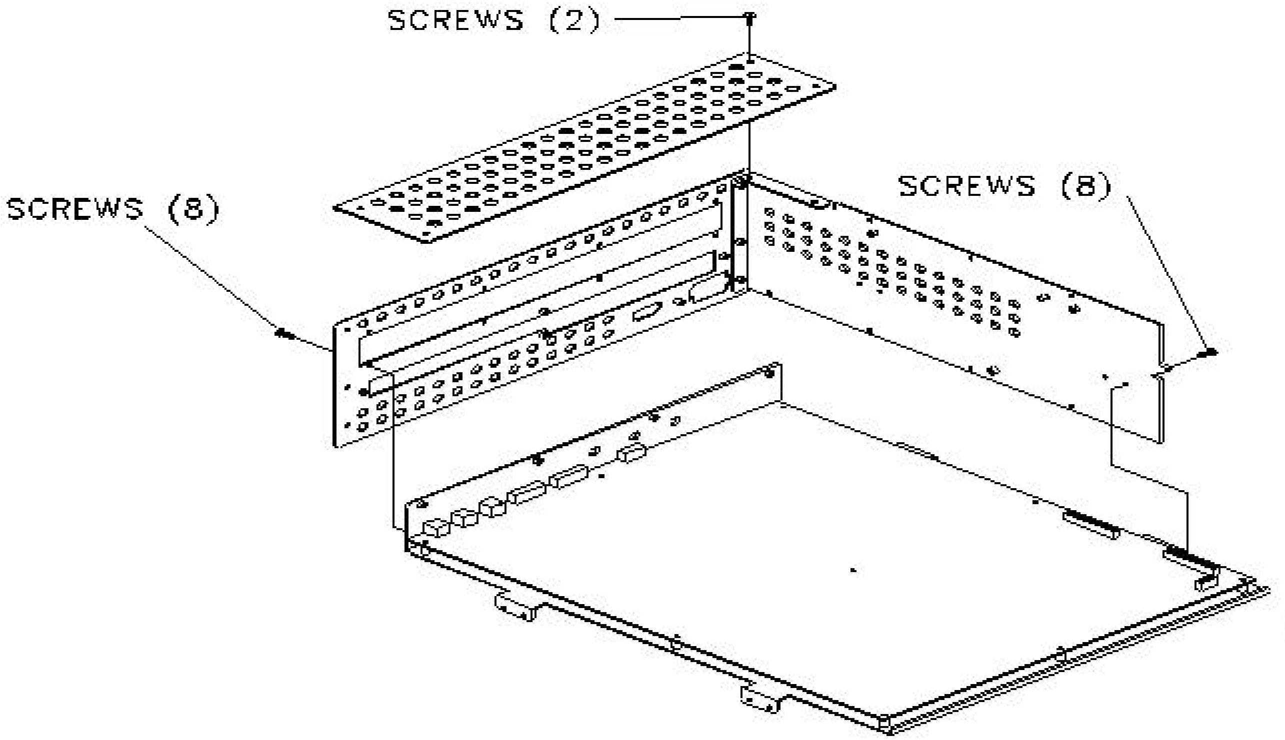
13- REMOVING FAILED PIN SWITCH DRIVER BOARD ASSEMBLY

1. Remove the three 6-32 screws on the top rear of the RFSC module, and remove panel.

2. Disconnect all cables attached to the PIN Switch Driver Board. See Illustration L3133b in Section 12. The board is located in the middle of the RFSC module. See Illustration L3131a in Section 2.

3. Remove the twelve 6-32 panhead screws securing the PIN Switch Driver Board Assembly to the side and rear panels of the RFSC module.

4. Remove the failed PIN Switch Driver Board Assembly. See Illustration L3139a.



PIN SWITCH DRIVER BOARD
ILLUSTRATION L3139A

14- INSTALLATION OF NEW PIN SWITCH DRIVER BOARD

1. From the top, position the PIN Switch Driver Board Assembly inside the RFSC module.

2. Install twelve 6-32 panhead screws securing the PIN Switch Driver Board Assembly to the RFSC module.

3. Reconnect all cables to the PIN Switch Driver Board.

4. Replace the top rear panel and secure with the three 6-32 panhead screws.

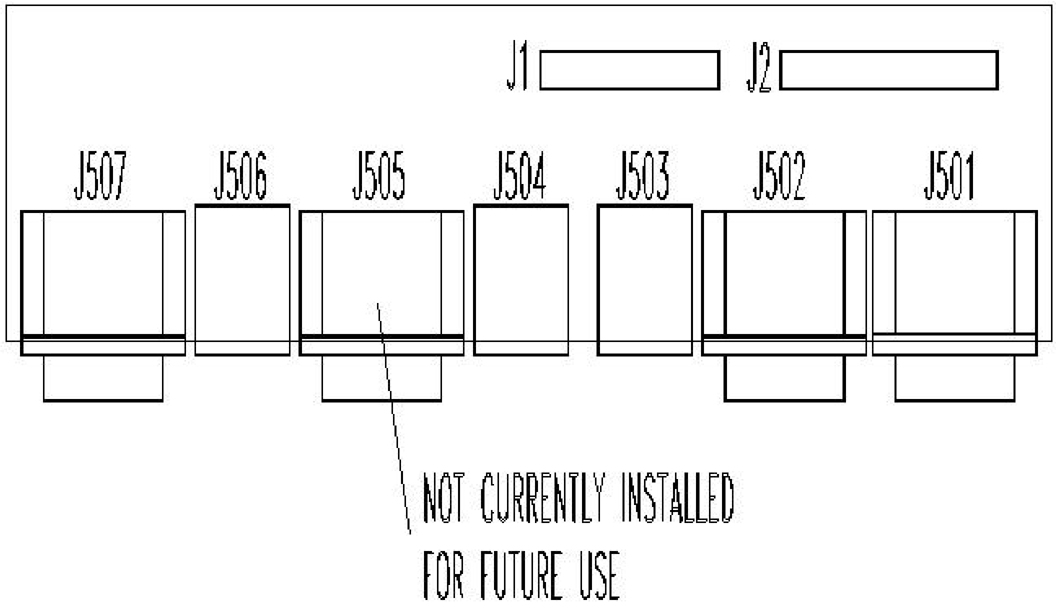
5. Close the lid and tighten the screws. Slide the RFSC module back into the RF/Pen cabinet and secure with the four 10-32x1/2 panhead screws and four #10 flat washers.

6. Replace front door.

7. Remove lock out and tag out and power up the RF/Pen cabinet.

15- RFSC I/F BOARD SETUP

See Illustration L3164a, RFSC I/F Board Layout.



RF SYSTEM CONTROLLER INTERFACE BOARD LAYOUT
ILLUSTRATION L3164A

16- REMOVAL OF THE FAILED RFSC I/F BOARD ASSEMBLY

1. Open rear door of RF/Pen cabinet.

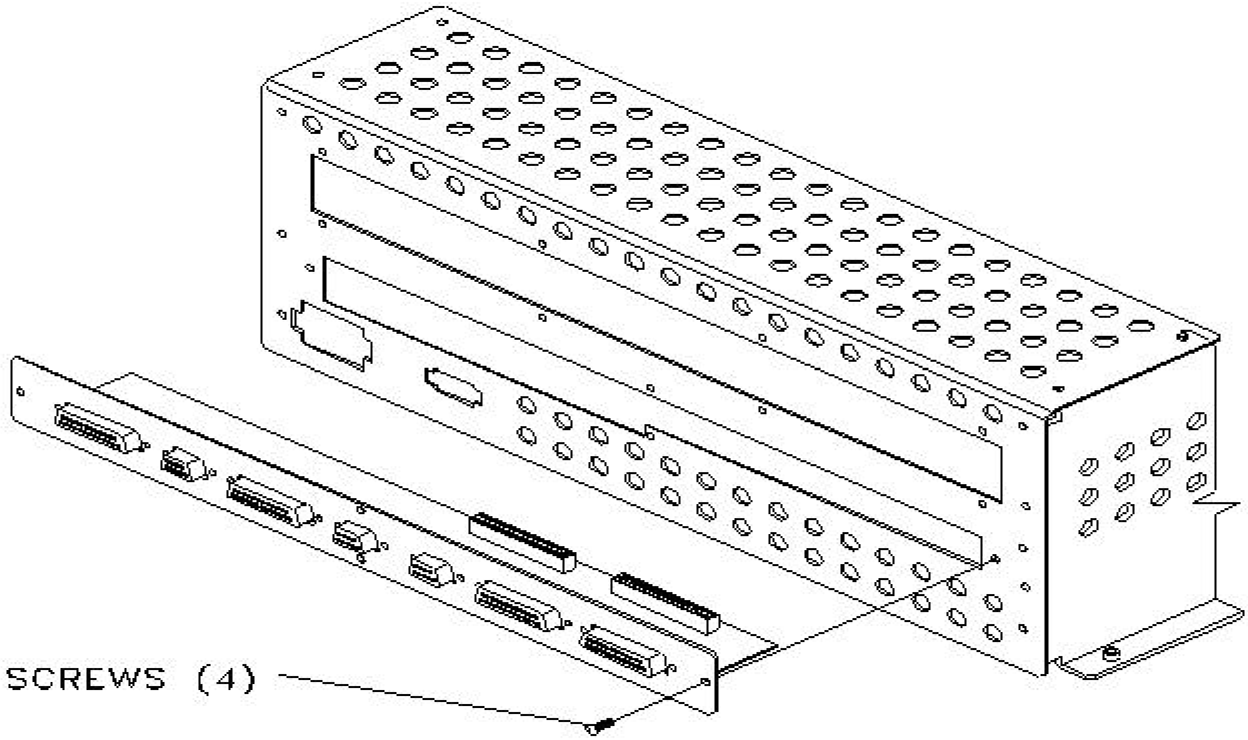
2. Disconnect all external cables attached to the RFSC I/F Board.

3. Remove four 6-32 panhead screws.

4. Slowly pull out the I/F assembly. If assembly does not pull out then module must be opened to disconnect ribbon cables.

5. Disconnect the two ribbon cables.

6. Remove the failed RFSC I/F Board Assembly. See Illustration L3140a.



RF SYSTEM CONTROLLER INTERFACE BOARD
ILLUSTRATION L3140A

17- INSTALLATION OF THE NEW RFSC I/F BOARD ASSEMBLY

1. If the RFSC module was pulled out, slide module back into RF/Pen cabinet and secure with the four 10-32x1/2 panhead screws and four #10 flat washers.

2. Reconnect the ribbon cables to the RFSC I/F board.

3. Position the I/F board on the rear panel of the RFSC module.

4. Install four 6-32 panhead screws.

5. Reconnect all external cables to the RFSC I/F board and close rear door of the RF/Pen cabinet.

6. Replace front door.

7. Remove lock out and tag out and power up the RF/Pen cabinet.

18- REMOVAL OF FAILED RFSC MODULE

This procedure requires two people.

1. Remove all external cabling to RFSC module.

2. Remove six 8-32x3/8 screws (three per slide) that attach the RFSC module to the slides. This enables you to completely remove the unit (see Illustration L3119a in Section 2).

19- INSTALLATION OF NEW RFSC MODULE

1. Install six 8-32x3/8 screws to secure the RFSC module to the slides of the RF/Pen cabinet.

2. Carefully slide the RFSC module back into the RF/Pen cabinet.

3. Install four 10-32x1/2 panhead screws and four #10 flat washers to the front of the RFSC module to secure to the RF/Pen cabinet.

4. Replace front door.

5. Remove lock out and tag out and power up RF/Pen cabinet.
