Applies To:

HTML Publications released after February 20, 2006

Problem: The present HTML user interface does not meet end user needs.

Solution: An improved user interface has been developed for HTML service publications. The design is the result of global feedback sessions with end users. The main CTQs were:

- Usability (vertical navigation frame, maximize vertical space in display frame, scrollable/resizable frames, "keep it simple")
- Browser compatibility: Internet Explorer 6.0 or later, Netscape 8.0 or later, Mozilla/Firefox 1.5

All CT and PET HTML publications released after February 20, 2006 will have the new user interface. Use the following PET (DST PET/LS4.X) demo link to view a publication with the new interface: http://www.ct.med.ge.com/tech_pubs/wip/5114841/frameset.htm

Illustration 1 shows the present HTML interface. Illustrations 2 thru 7 show the new HTML user interface and explain the features. The new interface does not change existing procedure content or navigation categories. It just changes "how" you navigate to procedures. With the new interface, the navigation list is always displayed (not hidden as with the present interface).

Key Features of New Interface:

- Simple set of control buttons in topbar
- Appropriate proprietary color coding in topbar
- Navigation list always displayed (not hidden as with present interface)
- Navigation frame easily resized
- Navigation list fully expanded/collapsed with single icon click
- Go to top of procedure page with single icon click
- Text search on titles in navigation frame
