1- INTRODUCTION

The Gradient Driver Subsystem Extended Error Log (GDT-EEL) is a new laptop-based ToolBook tool that provides additional information for Gradient Driver subsystem error messages that appear in the Release 8.0 Error Message Log.

These error messages have been through several service reviews; however, there will probably be cases that are not covered due to the nature of a new hardware subsystem. If there are other cases that are not covered in some of these error messages, and you find a solution for, or explanation of, the error, please submit a CQA to document what you have experienced. That information will be validated and added to this Gradient Driver Subsystem Extended Error Log.

2- USING THE GRADIENT DRIVER SUBSYSTEM EXTENDED ERROR LOG

When an error occurs, and there is not enough information in the error log to help solve the problem, look at the end of the error message. If there is an arrow (→) as the last character, there is extended service relevant information available.

The Gradient Driver Subsystem Extended Error Log is normally invoked through the Main Service Methods menu under Tools.

Start the procedure for Gradient Extended Error Log.

The first page of the EEL screen has three soft keys:

[Exit] allows you to close the file.

[?] provides author information.

[Extended Error Log] takes you to the EEL database.

Once in the EEL, there are three major fields: The upper field is the *Enter Error Number* field, the middle field is the *Standard Error Message:* field, and the lowest field is the *Additional Information:* field. The *Enter Error Number* is an active field so that error numbers can be typed in as needed.

Type in the error number and click on **[Search]**. If there is no additional information, the message:

'No Additional Information for error # 223XXXX' shows in the *Additional Information:* field.

If the number has been incorrectly typed, the message:

'XXXXX is an invalid error number, must be 7 numbers' appears in the *Standard Error Message:* field.

If there is additional information, it appears in the field called *Additional Information:*.

3- KEEPING THE GDT-EEL UP-TO-DATE

One of the best ways to keep this extended error log up-to-date is to submit a CQA with accurate troubleshooting information. As CQAs are received, they are reviewed, and entered, allowing this new tool to be useful, up to date, and relevant.

REVISION HISTORY

REV	DATE	AUTHOR	PRIMARY REASONS FOR CHANGE
0	May 21, 1998	J. Saperstein	Initial conversion from Toolbook to Word file.
1	October 13, 1999	K. Keshena	Changed to add proprietary header.
