

The VRE (Volume Reconstruction Engine) consists of:

- Infiniband board (located in MGD Chassis, slot 2)
- Network Switch (located in SC cabinet)
- 1, 2, or 4 ICN Modules. Shown in the picture are 5127452 ICN's. The 5127452-3 ICN's are silver. (Located in SC cabinet)

The VRE is responsible for image reconstruction. The ICN's are data processors which receive image data through the Infiniband switch via network communication.

Available Diagnostics for testing the VRE:

Infiniband Loopback Test
Infiniband Communication Diagnostics

VRE Communication and hardware Diag
ICN Infiniband Loopback test
